DETAILED ACTION

The application should be reviewed for errors.

To facilitate processing of papers at the U.S. Patent and Trademark Office, it is recommended that the Application Serial Number be inserted on every page of claims and/or of amendments filed.

Applicant's election without traverse electing to prosecute the invention of Group I, claims 1-3 on 10/23/06 is acknowledged.

Claims 1-3 are being considered on the merits to the extent that they pertain to enzymes and the secondary treatment and the product is cyclodextrin.

Claims 4-5 are withdrawn from consideration as directed to a non-elected invention.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Lima *et al.* (β -Cyclodextrin production by simultaneous fermentation and cyclization. Appl Biochem Biotechnol. 1998 Spring;70-72:789-804.).

The claims are directed to an ethanol production process wherein a sucrose or starch-containing feedstock is hydrolyzed under fermentation conditions and wherein the secondary

Art Unit: 1651

treatment agent cyclodextrin glycosyl transferase (CTGase) is added. The reaction is carried out at a temperature of about 20°-40°C and a pH of between about 4.0 and 6.5.

Lima teaches an ethanol production process wherein a sucrose or starch-containing feedstock is hydrolyzed under fermentation conditions and wherein the secondary treatment agent cyclodextrin glycosyl transferase (CTGase) is added. See, e.g., page 792, paragraph 2 and Figure 4.

No claim is allowed.
